Autodesk relaunched and marketed it as AutoCAD 360, and relaunched its competing suite of software as Autodesk 123D. AutoCAD 360 combines some capabilities of Autodesk Designjet and Autodesk 123D. .NET and VBA are both integrated into AutoCAD, however.NET functionality is not well known or used in the industry. On March 11, 2008, Autodesk announced that ObjectARX is being deprecated, and that Autodesk Software Inc. would not be supporting ObjectARX or its API after Autodesk 2007. ObjectARX development will continue but the API will be removed. In 2016, Autodesk announced that the.NET version of AutoCAD will be available on Microsoft Windows. Concurrent use There are several concurrent use options for AutoCAD. Pro version AutoCAD LT Pro version is the same as the community version, except that the installation is done under the regular AutoCAD installation directory. Pro users may use the same graphics cards, hardware, operating systems, and similar software as those used in production. There are some differences in how users are licensed: The system shows two licenses, one for the full version of AutoCAD LT and one for the community version. The free version of the software is limited to five concurrent users. The Pro version of the software can have as many as nine concurrent users. Professional version The AutoCAD Professional version is the same as the Pro version, but in addition it also includes the ability to configure users (even when at home) to prevent unauthorized use of the software on company-owned computers. Professional users may use the same graphics cards, hardware, operating systems, and similar software as those used in production.
