Using monoclonal antibodies (MoAbs) specific for human blood monocytes and myeloid dendritic cells, we have identified a MoAb, designated S3, that reacts with 60-70% of peripheral blood monocytes and a minor subpopulation of neutrophils, eosinophils and some basophils. It also reacts with monocytoid cell lines, a subset of lymphocytes and all neutrophils. Staining of cryostat sections of tonsils, small intestine and lymph nodes shows its reactivity with subpopulations of mononuclear cells. In Western blot analysis, this MoAb was found to react with a protein with an apparent molecular weight of 76 kD in total cell lysates of monocytes, neutrophils, eosinophils, B cells and several myeloid cell lines. Reactivity was also observed with the human tumor cell line, OAW-42, but not with the human tumor cell line, HEp-2. Immunoprecipitation of 125I-labeled OAW
